Theme: Speech-to-Face | Light / Defense

1. Google Colab notebook

Open the submitted notebook using the link below. The existing submission URL is unchanged.

https://colab.research.google.com/github/zyan0246-del/FIT5230-Light-Context-Matters/blob/main/milestone3/notebooks/Milestone3.ipynb

2. Source and verification

GitHub project: source code, experiment artifacts and reports

Colab verification record: final default workflow and historical experiment run

Fixed notebook snapshot: 053bdcf2ab49bc3be646ee63a4a4480538d09520

3. Final verification summary

Notebook	11 code cells, execution counts 1-11; no error outputs.
Tests	46 passed, 1 non-fatal pandas FutureWarning.
Colab environment	Python 3.13.15; environment versions recorded in the notebook.
Verification scope	Default workflow completed. Both optional experiment flags remained False.
Result provenance	Experimental tables are saved reference artifacts, not newly recomputed video experiments.
Final display edit	Setup source hidden by default; executable code, execution counts and Colab outputs preserved.

Private peer videos are excluded from the public repository. Their hashes, aggregate results and optional rerun instructions are provided. The Strategy B analysis covers one aligned attacked pair; it is not a general real/fake classifier.
